

The *-idz-* formations in Griko, constitute an important case for the hypothesis that derivational elements may acquire a more functional character, since *-idz-* seems to have lost its derivational nature, i.e. to form denominal verbs, and has become more functional. Finally, and more importantly, the Griko *-idz-* case illustrates the interaction between derivation and inflection, since crossing the border from one process to the other does not seem to be particularly difficult.
